### **DETAILED ACTION**

#### ***Claim Rejections - 35 USC § 112***

1. Previous rejections to claim 15 under 35 U.S.C. 112, second paragraph, are withdrawn.

#### ***Claim Rejections - 35 USC § 102***

2. Claims 1-15 remain rejected under 35 U.S.C. 102(b) as being anticipated by Tanabe et al.

#### ***Response to Arguments***

3. Applicant's arguments filed 6-9-03 have been fully considered but they are not persuasive. The applicant argues that the prior art compositions do not meet the applicant's buffer requirement.

4. It is important to note the applicant's buffer limitation:

"comprising .. B. a buffer, wherein the aqueous, buffered, fluoride containing composition has a pH greater than 7.0 to about 11.0."

5. It should be noted that the applicant has not defined the type of buffer used, the amount of buffer used or the extent of the buffering (i.e. slightly buffered or highly buffered).
6. The examiner must read these terms as broadly as possible. Many compounds will buffer a solution to different extents and the amount required will also determine the extent of buffering.
7. The applicant's figure 1 represents a composition with a drop in pH. This figure does not demonstrate that buffering fails to occur. It only demonstrates that the composition of figure 1 is

Art Unit: 1751

less buffered than that of figure 2. One cannot state that figure 1 represents a completely unbuffered solution as only 3 data points are demonstrated. Furthermore, this diagram *does not* represent the prior art compositions.

8. The applicant provides a definition of buffering and buffers on page 5 of the instant specification. The applicant states the following (see line 24):

"In addition compositions not normally thought of as useful buffers such as benzotriazole, selected biological compositions like glycine or vanillin and the like can be used."

9. From this statement it is clear that a broad range of compounds can function as buffers. Furthermore, Tanabe et al clearly teaches the use of various compounds meeting this broad definition including the benzotriazole (see Tanabe et al, col. 5, lines 35-41 and example 4).

10. It is not clear to the examiner how this compound would not provide at least some buffering to the solutions of the prior art. As the applicant has not provided limitations defining the extent of buffering and has provided no data demonstrating any deficit in the prior art, the examiner must maintain the position that the prior art compositions meet this very broad buffering limitation.
